Investment objective

The SMO Physical Gold ETC is designed to provide exposure to the spot price of gold, less fees and expenses, via investment in responsibly sourced gold from specific, named mines.

About SMO Gold

Single Mine Origin (SMO) Gold is fully traceable gold produced by mines that comply with rigorous standards and provide environmental, social and cultural support to their local communities. SMO approval is managed by Single Mine Origin Limited (SMO Ltd), an independent company set up to provide a trusted standard for responsibly sourced gold:

- **Mining companies** must meet international standards such as the World Gold Council Responsible Gold Mining Principles *and* SMO Ltd's strict governance standards
- **Individual mines** are monitored against a set of ESG metrics and obligations and subject to regular site visits
- **Refiners** must comply with the LBMA Responsible Gold Guidance and keep SMO Gold segregated throughout the refining process

SMO Gold is segregated and monitored across the supply chain, from the mine to the ETC custodian. SMO Ltd oversees every step of the process and collects all relevant data. Find out more at singlemineorigin.com.

Investment process

The ETCs are debt securities backed by SMO Gold bars. The bars are held in secured allocated accounts in the name of the Issuer and stored in a secure vault with the Custodian. A list of the bars held will be published daily at tabulagroup.com. The gold is valued daily at the LBMA Gold Price PM, a recognised benchmark quoted in USD per troy ounce of gold for delivery in London.

Key risks

An investment in the ETCs involves a degree of risk. Any decision to invest should be based on the information contained in the Prospectus. Prospective investors should obtain independent accounting, tax and legal advice and should consult their professional advisers to ascertain the suitability of the ETCs.

No capital protection: The value of your investment may go down as well as up and you may not get back the amount to invested.

Market and price risk: the price of the ETCs will be affected by a number of market including the price of gold, interest rates and exchange rates. Precious metals can be highly volatile and there is a risk of significant fluctuations in the price of the ETCs.

Complexity: The securities are complex, structured products involving a significant degree of risk and may not be suitable or appropriate for all types of investor.

Availability of SMO Gold: There is no guarantee that the Issuer will be able to source SMO-certified gold

Secondary market and liquidity risk: There is no guarantee that there will always be sufficient buyers or sellers to allow investors to sell or buy securities readily, and the price of the securities in the secondary market may not accurately reflect the value of gold.

Counterparty risk: The securities may lose value if any institution providing services to the Issuer fails to meet their obligations.
